

SOLID SURFACE AND MAINTENANCE

ROUTINE CARE FOR MATTE FINISH

REMOVING STAINS AND FIXING SCRATCHES OR BURNS

Like other high-use product, nicks, scratches and cuts are inevitable with Solid Surface. But because Solid Surface is solid all the way through, it is easy to renew to its original appearance as described below.

Identify the extent of the damage and ascertain whether a minor repair will solve the problem. If the damage is minor, try to repair it with an abrasive cleanser or a common household degreaser.

Soapy water or ammonia-based cleaners will remove most dirt and stains from the surface. If the above step is unsuccessful, follow the simple polishing steps below:

MATTE FINISH

1. Clean the surface with water, making sure no dust remains.
2. Use 800 sandpaper to polish the surface in focus with water to gain a smooth surface and matte finish.
3. Wipe up the water with clean and dry cloth.

PREVENTING HEAT AND OTHER DAMAGE

Avoid exposing Solid Surface to strong chemicals, such as paint removers, oven cleaner, etc. If contact occurs, quickly flush the surface with water.

Remove nail polish with a non-acetone-based polish remover and flush with water.

Do not cut directly on Solid Surface countertops

RENEWING SOLID SURFACE

While nicks, stains, cuts and scratches can permanently mar most other surfaces, they won't compromise the appearance of Solid Surfaces. That's because it's easy to restore Solid Surface to its original state, using an ordinary abrasive cleanser and common household degreaser. If damage does occur, Solid Surface can be repaired on site, saving both downtime and aggravation.
